These were isolated from expressed sequences tags (ESTs). They can be used to stimulate cell growth, to regulate haematopoisesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat inferrility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. parkinson's disease. The present sequence is a protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            99US-0142977
                                           AAX34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidonis, sinusitis, purulent citis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is the sequence of a Helicobacter pylori cellular protein.

CC The protein may be used in a vaccine to prevent or treat H. pylori collinection or to identify H. pylori polypeptide binding compounds, to identify H. pylori pyloripeptide binding compounds.

CC useful as potential H. pylori life cycle activators or inhibitors. The CNA and probes derived from it may be used for the identification of the pylori in a sample and the diagnosis of H. pylori infection. Nucleic cards sequences complementary to the DNA act as antisense sequences and card sequences complementary to the DNA act as antisense sequences and card sequences complement the translation of H. pylori mRNA. Antibodies can be used to prevent the translation of H. pylori mRNA. Antibodies and card as a continuous continuous continuous continuous continuous conferences of the pylori (ATCC 55679) was determined from overlapping contigs generated the pylori (ATCC 55679) was determined from overlapping contigs generated to mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions cardine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by ERC membrane proteins. Having identified and determined the sequences of control of the pylori by ERC mapplification for recombinant polypeptide production, e.g. in E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 38

AAH53304 to AAH53970 represent nucleic acids (1) encoding polypeptides (II), given in AAGG1454 to AAG83120, from Staphylococcus epidermidis. (II) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (1) may be used to produce the spidermidis polypeptides (II) wish the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the polynucleotide sequences from the present invention. AH55991 to AH55098 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention.

N. B. The present invention specifically claims all the polynucleotide sequences given in the esquence listing of the present specification, however the sequence listing only goes up to SRQ ID NO:4454 so even though sequences are given in the disclosure for SRQ ID NO:4455 to 4472, on sequences are given in the disclosure for SRQ ID NO:4455 to 4464.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    325 DINNYHFEGIDLLITHDFDTSQ---LLQIPKVIQVSPLFSDEDAKKIEFFVKAMQNPLS 381

Novel yeast SRB (suppressor of RNA polymerase B) proteins SRB4, SRB5, SRB9, SRB9, SRB10 and SRB11 (AAW18321-28) are transcription regulatory factors that act as positive and negative regulators of RNA polymerase II activity, and are components of the RNA polymerase II nolonezyme. They were identified using methods designed to identify transcription factors involved in RNA polymerase II c-terminal domain (CTD) function. SRBs and SRB9 appear to repress CTD activity. Genomic clones (AAT59904-11) for the SRBs are been obtd. SRBs can be used to treat diseases resulting from alteration or deletion of the SRB gene, pref. by gene transfer technology. They can also be used in in vitro transcription of DNA and to identify endeds. that modify gene transcription.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    237 DFQLTIVTCKQFPKLSCIQLNCIDTQFTKLLDDNPTBLDMPTYVDQNPLTWHKIIQLILM 296

                                                                                                                                                                                                                                                                                    The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB3300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogutt and cheese.

Note: The sequence data for this patent is based on equivalent patent wo200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      234
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                187
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       175
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   104
```

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the polypeptide and polyp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           22;
   other traits to assess biodiversity
responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00100-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | | | : : : : : | | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | : | | : | : | | : | : | | : | : | | : | : | | : | : | | : | : | | : | : | : | | : | : | : | : | : | | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | :

```
The invention relates to an isolated or recombinant homologue of US28 protein which binds a chemokine (encoded by an open reading frame in the unique short (US) region in human cytomegalovirus (CWM) genome), having at least 75* identity to a rheasum smokey RhUS28.1-RhUS28.5, Rh78 and RhUS33 (encoded by an open reading frame 78 in the unique long (UI) and CRM state of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and in methods for
                                                                                                                                                                                                                                                            Isolated or recombinant homologues of US28 proteins and nucleic acids encoding the proteins, for use in vaccine compositions for treating an animal infected with, or at risk of infection by, cytomegalovirus -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 RHKCISILEFFKNLLFVHLLSLSKNQREGCSTDMAVVSTPFFNRNLWYRLLSSRFSLWKS 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180 IASVMRTLDKDNFSLTPDLIHDLLGHVPWLLHP-SFSEFFINMGRLFTKVIEKVQALPSK 238

                                                                                                                                                                                                                                                                                                         ş
                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel human secreted polypeptides. The projectides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; in treatment of leukaemias. AAU33510-AAU33304 represent the amino acid of sequences of novel human secreted proteins of the invention.

This invention describes a novel method for the genetic treatment of hyperlipidemia by altering genes, in hepatcoyres, for apoprotein (apo) B, E or Al. Low density lipoprotein (LDL) levels in the blood are reduced by altering an apo B gene (I) in a hepatcoyre. The invention describes a method for the therapeutic and/or prophylactic method involving altering an apo B gene in hepatcoytes by introducing the mutations Argilacys, Argisacys or Cysisakry and a method for ameliorating atherosals by altering the apo Al gene in a hepatcoyte so that the altered protein can dimerize. Altering expression of apo genes regulates levels of high and low density lipoprotein cholesterol. Altering expression of apo B, E and Al genes is used to treat or prevent atherosclerosis, coronary heart disease, Alzheimer's disease, hypobetalipoproteinemia. This sequence represents a fragment of the human Apo B protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Key

```

```
This sequence represents the human apoliporptoein B-100 (apoB-100).

Fragments of this sequence can be used in the peptide of the invention, which has the formula (I), or their variants with one or more internal deletions, insertions or substitutions, while retaining anti-coagulant properties of apolloporoein B-100 (apoB-100).

Z1 - KAQ-XI-KKNKHRHS-X2-T-Z2 (I), X1 = 5 or Y; X2 = T or I;
Z1 = the N terminus of the peptide, or 1-47 amino acids (as);
Z2 = the C terminus of the peptide, a terminal amide group or 1-77 as.
CC 22 = the C terminus of the peptide are used for simultaneous, separate or sequential treatment of cencer, particularly to prevent metastatic pread. They are also used to inhibit thromboplastin-mediated processes, specifically to prevent or reduce blood coagulation (e.g. during or after ungery or in cases of hear attack, stroke etc.) and to inhibit a critic as such or as part of a 98-as apptide, inhibits activation of the surface of thromboplastin and of platelets by thrombin. It binds to the surface of thromboplastin and of platelets by thrombin. It binds to the certains of the periduce S8-66 of thromboplastin. Since (I) are much smaller than

Human apolipoprotein B-100; apoB-100; very-low density lipoprotein; VLDL; apolipoprotein; binding; in vivo transport; nucleic acid; binding domain; nuclear localisation sequence; gene therapy; cancer; cystic fibrosis; non-small cell lung carcinoma; diabetes; arteriosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents human apolipoprotein B-100 (apoB-100). ApoB-100 is a major apoprotein component of very-low density lipoproteins (VLDL), intermediate density lipoprotein (IDL), low density lipoproteins (VLDL), and lipoprotein a. The specification density lipoproteins (LDL), and lipoprotein a. The specification binding and in vivo transport of nucleic acids. Binding domains (see AAW96872-77) and nuclear localisation sequences (see AAW96878-97) for use in the composition can be derived from the present sequence. The composition is used to deliver nucleic acids to eukaryotic cells, in vivo or in vitro, for expressing a therapeutic polypeptide or antisense molecule (or ribozyme). Specifically they are used for gene therapy of cancers (particularly non-small cell lung carcinoma), diabetes, cystic fibrosis and arteriosclerosis.

This polypeptide comprises a novel thermostable DNA polymerase of the thermophilic anaerobe Thermoanaerobacter thermophicous Its amino acid sequence was deduced from an isolated genomic DNA sequence (see AAT90447). Recombinant DNA polymerase can be produced in host cells. The enzyme can be used in claimed methods: (a) for strand displacement amplification (SDA) when used with a thermostable restriction enzyme; (b) for production of cDNA when used in conjunction with polymerase and decoxyribonucleotides; and (c) to provide reverse transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4344
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4404 NFTSQLSSQVEQFLHRNIQEYLSILTDPDGKGKEKIAELSATAQEI -- IKSQAIA 4456

                                                                                                                                                                                                                                                                                                                                                                                                              19;
                                                                                                                                 This sequence represents the DNA polymerase of Thermoanaerobacter thermohydrosulturious (Tt), deduced from PCR amplified genomic DNA (see AAZ19659). Claimed DNA polymerases (see AAX18131, AAX1815 and AAX31816) have the exonuclease activity of this enzyme removed by having 540-582 amino acids removed from the N-terminus or having an amino acid substitution at position 8 or 706 of the sequence. A novel method for PCR uses an enzymatically active DNA polymerase that has at least 80% identity in its amino acid sequence to the Tt DNA polymerase and has an exonuclease activity removed. Kits for and reverse transcription-PCR are claimed that utilise such Exonand reverse. The Tt DNA polymerase is stable at elevated bNA polymerases. The Tt DNA polymerase is stable at elevated temperatures, e.g. 70+ deg C. Removal of its exonuclease activity does not affect its ability to replicate DNA or its thermostability.
                                                  polymerase from Thermoanaerobacter thermohydrosulfuricus, used amplification, sequencing, polymerase chain reaction and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents a claimed mutant DNA polymerase of Thermoanderobacter thermohydrogulfuricus (Tt) in which the Asp-8 residue of the native enzyme is replaced by Ala. This amino acid substitution removes the exonuclease activity of the DNA polymerase. Claimed DNA polymerases have their exonuclease activity removed by N-terminal deletion or amino acid substitution. A novel method for PCR uses an enzymatically active DNA polymerase and has an exonuclease activity removed. Kits for that has at least 80% identity in its amino acid sequence to the Tt DNA polymerase and has an exonuclease activity removed. Kits for PCR, strand displacement amplification of DNA, DNA sequencing, and reverse transcription-PCR are claimed that utilise such Exo-DNA polymerases. The Tt DNA polymerase is stable at elevated temperatures, e.g. 70+ deg C. Removal of its exonuclease activity does not affect its ability to replicate DNA or its thermostability. Note: the present sequence is not shown in the specification but is derived from the Tt DNA polymerase seugnece given in figure 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New DNA polymerase from Thermoanaerobacter thermohydrosulfuricus, used for DNA amplification, sequencing, polymerase chain reaction and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                184 MRTLDKDNFSLTPDLIHDLL-------GHVPWLLHPSFSEFFINMGRLFT 226

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                  This sequence represents a claimed mutant DNA polymerase of Thermoanaerobacter thermohydrosulfurious (Tt) in which the Phe-706 residue of the native enzyme is replaced by Tyr. This amino acid substitution removes the exonuclease activity of the DNA polymerase. Claimed DNA polymerases have their exonuclease activity removed by N-terminal deletion or amino acid substitution. A novel method for PCR uses an enzymatically active DNA polymerase that has at least 80% identity in its amino acid sequence to the Tt CDNA polymerase and has an exonuclease activity removed. Kits for PCR, strand displacement amplification of DNA, DNA sequencing, and reverse transcription-PCR are claimed that utilise such Exo-CDNA polymerases. The Tt DNA polymerase is stable at elevated temperatures, e.g. 70+ deg C. Removal of its exonuclease activity does not affect its abbility to replicate DNA or its thermostability. Note: the present sequence is not shown in the specification but is considered from the Tt DNA polymerase sequence given in figure 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New DNA polymerase from Thermoanaerobacter thermohydrosulfuricus, used for DNA amplification, sequencing, polymerase chain reaction and reverse transcription -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    T. thermohydrosulfuricus DNA polymerase F706Y mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           06-DEC-1999
